

Lionel Giriteka

Lionel Giriteka is originally from East-Africa. He was born in Burundi, and moved in the mid-teens to China for one year, before moving to Eastern Norway. He loves pure science as well as applied science, and has strong interests in tutoring. He has been tutoring new students in their first year at the Faculty of Medicine and Dentistry.

Lionel is a medical student on research track. He was admitted to the research program for medical students at the end of 2015, with Professor Arvid Lundervold as his main supervisor and Professor Trygve Hausken as his co-supervisor. His area of research is neuroimaging. Currently, he is working on a study of brain activity in patients with irritable bowel syndrome. The first part of this study is focused on methods for quantification and visualization of structural and functional brain connectivity.
